Student Declaration

"I declare that this is all my own work. Any material I have referred to has been accurately referenced and any contribution of Artificial Intelligence technology has been fully acknowledged. I understand the importance of academic integrity and have read and understood the University's General Regulation: Student Academic Integrity and the Academic Misconduct Procedure. I understand that I must not upload my work before, during or after submission to any unapproved plagiarism detectors or answer sharing platforms, or equivalent, and that only University-approved platforms should be used."

Guidance notes

The team must use the templates provided in this document when making your teams coursework submission. Please carefully read the notes below to help to ensure you make an acceptable submission that makes correct use of the templates provided.

Step 1 – Story Mapping

Use your team's features and user stories from part 1 to perform a story mapping exercise across five hypothetical sprints, each of which represents the results from a 2 week long sprint and assumes a 5 person team. It would be useful to identify themes at this point to guide the mapping process. Enter the theme, feature and user story titles into the table cells as appropriate. The template can be altered to accommodate different sizes of features and user stories as needed. For example, one theme may span 3 features while another might span 2 features. You can use merged cells to organise the table to reflect these differing sizes.

Story Mapping template

Sprint 1										

Sprint 2										
Sprint 3										
Sprint 4										
Sprint 5										

Step 2 – Designs
*Select **6 of the features** planned into one of the teams sprints and design wireframes using 3ups and 1ups. Provide rationale for the final design choices and decisions (guide 250 words per feature). Complete the designs by providing a high-fidelity design using Figma.*

The team are required to work together and to produce designs for 1 of the features. Then each team individual is required to take a feature of their choice which does not conflict with other student choices or the feature selected by the team. Team individuals will then also produce designs for that particular feature.

Step 3 – Test Case template
*Select **10 of the user stories** that your team has defined and specify **3 test cases** for each (**30 test cases in total**).*

Keep the associated user story's acceptance criteria in mind. Please make sure to use the test case template below. There should be only one test case documented in each test case template, listing the steps in that test case along with facts relating to each step. Note, this template has been modified to reflect the fact that you will not actually be running the test, which is somewhat artificial.

The team are required to work together on 5 user stories, producing 3 test cases per user story.

Team individuals will be required to take 1 user story which is unique to them and produce 3 test cases.
